

How to Move SpotOn! Flexo software to another computer

Prior to moving SpotOn! Flexo it is important to Back up your current database that contains your library of colors, tolerance settings, and jobs. You also need to De-Activate your current License.

SpotOn! Flexo (Stand Alone) version

1) Back up your current Database. The Database can be found by clicking on Settings and then clicking on Show Log Files.

🗼 SpotOn! Settings	_ _ ×
General Instrument Analyze Verify Spot	
Require a password to change Settings	
License: Trial Mode. Days remaining: 145 Activate	
Registration:	
When displaying density show:	
 Absolute (substrate included) Relative (minus substrate) 	
Company Name: All Printing Resources, Inc.	
Report Logo:	
Page Setup: Change	
Log Files: Show	
Data Source: Local	
Switch to Server	
	Done

This will open a folder that contains your Database folder. Make a copy of this Database folder and place it on a separate server or portable drive.

	Switch to Server
	Done

3) You can now install SpotOn! Flexo on your new computer and Activate the license. Once the new copy has been installed and Activated, click on the same Show Log Files button and replace the Database folder with the Database folder you backed up from the original SpotOn! Flexo installation. Relaunch the software and the backed up database will be active.

SpotOn! Flexo (Client Server) version

1) Following the above instructions if you are moving a Client to another computer.

2) If you are moving the Server portion of SpotOn! Flexo you need to back up the Server Database folder by launching SpotOn! Admin.exe in your applications folder.

C:\Program Files (x86)/SpotOn! Server\SpotOn! Admin.exe

3) Stop the SpotOn! Server by clicking on the Red square.

👌 SpotOn! Server	Administrator	×
	Running	
	Manage Users	Show Log

When Server is not Running click on the Show Log button and this will open a folder that contains the Server database file.

4) Copy the SpotOnServer.db file and place it on a separate server or portable drive.
